**Intro**

For more than 35 years the devices of PHYSIOMED ELEKTROMEDIZIN AG have been used in the physiotherapy field as well as in sports. On the following pages you find a small selection of countless references from the world of sports with PHYSIOMED units.
Greetings to PHYSIOMED from the national Team of Austria (Olympic summer games in Los Angeles).
“PHYSIOMED ELEKTROMEDIZIN AG” is a supplier of the German team (General University association) for the XXIII. Summer-Universiade in IZMIR.

Dear Mr. Steinlechner,

I have been using the HIVAMAT during the entire Paralympics 88, for both the Swiss and partly the American team. Our success was enormous: up to now 33 medals and we still do not feel tired.

With the best regards,

G. Ramsegger
Team Physiotherapist.
**2006 National League Batting Champion & Pittsburgh Pirates All-Star 3rd Baseman has endorsed DEEP OSCILLATION® therapy by the HIVAMAT® 200.**

Freddy says, “I use DEEP OSCILLATION® whenever I have any sort of nagging pain or tightness throughout my body. Whenever I feel something come up I just turn to the best machine I’ve ever used! I really do think it keeps me on the field.”

During the season as all baseball players know, aches and pains happen. “One time I fouled a pitch off of my calf/shin during spring training and I had a lot of swelling that I thought would keep me out for days, but thanks to the DEEP OSCILLATION®, I was back out there the next day! I would recommend the DEEP OSCILLATION® to anyone!”
San Diego Padres, Pitcher
2007 National League Cy Young Award Winner

“The DEEP OSCILLATION® helps to keep me at the top of my game. Thank you for introducing our athletic trainers to the DEEP OSCILLATION®.”

"The DEEP OSCILLATION® has been a regular part of my regimen between starts for the past two years. It really has made a difference significantly decreasing the amount of discomfort I have had after pitching which has allowed me to throw on my normal bullpen day, instead of skipping a work session."
In competitive sport athletes often drive themselves beyond their physiological limits. Due to a whole range of stress factors, such as several games or competitions in quick succession, there is an increased risk of injury. In order to give the players the optimum treatment and therapy, today’s physiotherapists work with the most modern equipment available. Many of these devices make use of natural physical stimuli, such as warmth or electricity. This is designed to promote the body’s own activity, reduce the pain and restore health. These kind of devices are also used on the German basketball team, the DEUTSCHE BANK SKYLINERS, to treat injured or treatment-needy players. The devices used here include the electrotherapy device “IONOSON Expert” from PHYSIOMED ELEKTROMEDIZIN AG, headquartered in Schnaittach / Laipersdorf, Germany, which is one of the leading manufacturers for classic and innovative physical therapy in the fields of rehabilitation, sports and cosmetic medicine. The device uses ultrasound and two-channel stimulation current and is therefore used in combination therapy.

Daniel Rung, the new physiotherapist of the DEUTSCHE BANK SKYLINERS explains: “IONOSON-Expert works in a highly effective and precise way. It can either be used as a prophylactic measure, for direct treatment or to aid recovery. Mostly, however, to treat chronic irritations and alleviate pain.” In response to the question as to what possibilities the combination device offers, he adds: “Because the device works on the one hand using ultrasound and on the other with two-channel stimulation current, it allows various treatment options. Predominantly stress disorders, muscle/tendon attachment problems or irritations are treated in this way. It alleviates pain, relieves tissue and also accelerates the healing and recovery process. The healing process is gently stimulated and the duration of treatment is reduced.” The various setting options directly on the device allow you to work comfortably in the various frequency ranges.

The DEUTSCHE BANK SKYLINERS have already been treated with the “IONOSON-Expert”, namely Pascal Roller (following a thigh knock), Derrick Allen (following a deep-cut swelling) and currently Ilian Evtimov (following Achilles tendon and ligament problems).

Ilian: “I find the device to be extremely good and am more than happy for it to be used in my treatment. You notice an improvement almost straight away and you’re back in action much quicker. Another good thing is that it can be used at any time, so recovery is accelerated. These type of devices ought to be owned by every good sports club in order to aid the efforts of the physiotherapy department. As a result, athletes such as ourselves, whose locomotor apparatus is put under such strain, can receive the optimum treatment.”

Caption: In action and free from pain: Ilian Evtimov
Dear Mr. Jens Reinhold,

The Lithuanian Basketball Federation would like to express its gratefulness to your company for the perfect physiotherapy unit IONOSON-Expert. These units were successfully used for Lithuanian Men Basketball Team, the European Champions of 2003, and during the preparation for Olympic Games in Athens. It was also used for Lithuanian Junior Basketball Team (up to 20 years old), which is preparing for European Championship in 2004. The doctors of the teams are satisfied with the devices and the field of which they can much quicker cure various traumas.

Yours sincerely,

Saulius Samulevičius
Secretary General of LBF
Roger Hinds / ATC, LAT / Head Athletic Trainer / Dallas Mavericks
Steve Smith / ATC, LAT / Asst. Athletic Trainer / Dallas Mavericks:

“Thank you for introducing the athletic training staff of the Dallas Mavericks to the DEEP OSCILLATION® therapy system for use in the treatment of injuries to our players. Since our trial use and subsequent purchase of the DEEP OSCILLATION® therapy system, we have seen tremendous results in limiting the time lost from sports injuries, especially sprains and strains.

Just as you said when you presented the system to us in 2003, the DEEP OSCILLATION® therapy system is effective in the treatment of edema and the reduction of pain following sports injuries. When used in conjunction with other conventional modalities, the DEEP OSCILLATION® therapy system is a very important ingredient in the treatment recipe. It really seems to make our additional treatments such as muscle stimulation, ultrasound, moist heat, and ice to work more effectively. Also, the DEEP OSCILLATION® therapy system is user friendly.

Thank you once again for your outstanding support and friendship!”
British Super Middleweight Titel Holder / WBC No. 1 Contender

“The DEEP OSCILLATION® PERSONAL SPORTS machine has been very beneficial in aiding my recovery from the surgery I had to repair the ligaments in my right knee earlier this year.

Through regular application, it took a lot of the swelling out of my knee and I feel it has generally sped up the process of me getting back into my regular training routine. My specialist has been very impressed with my rate of recovery.

I also find DEEP OSCILLATION® PERSONAL SPORTS very helpful with the usual aches and pains I suffer when in the gym. It is very convenient as well. Because it’s so portable I can take it with me wherever I’m training, whether that be in Nottingham or in camp down in London.”
Vice world champion competition climbing 1993 / Professional climber

“The unique feature of DEEP OSCILLATION® is that it can be used at a very early stage and despite acute pain. Even with my chronic tendon damage, it feels incredibly good.”
Ohrdruf - On March 10, 2007, the German Cross Championship has taken place. In the 9800 meter run, Stephan Hohl has won his first German championship title.

PHYSIOMED ELEKTROMEDIZIN AG, a sponsor of Stephan, who regularly uses one of PHYSIOMED's combination therapy devices, the IONOSON-Expert, would like to say, "congratulations to Stephan Hohl!"
Dear “PHYSIOMED”!

We wish to thank PHYSIOMED and its personal for the collaboration during the last 1.5 years.

All sportsmen of the national Russian team of cross-country ski (man’s and female structure) have esteemed PHYSIOMED equipment for its quality and efficiency when carrying out various physiotherapeutic procedures. With HIVAMAT 200 we quickly and effectively treated sports traumas, an overload of lumbar spine (radiculitis), and killed pain in joints.

Ultrasound therapy, electrostimulation and vacuum massage of PHYSIOMED equipment helped us to restore sportsmen faster from a physical overload of various muscles, to remove both the spasmodic occurrence in them as well as overstrain of the locomotor system at speed-power work.

Daily use of new technologies of PHYSIOMED has allowed us to prevent from various sports pathologies of muscles, ligaments and joints, and to improve the quality of their restoration.
Many thanks to PHYSIOMED for the support of the High Diving National Team 2003

SWFC has given a Testimonial for the self treatment device DEEP OSCILLATION® PERSONAL SPORTS following a medial ligament injury sustained during play. Burton, 32 year old striker for Sheffield Wednesday, gave this testimonial to Julie Sorocyzn, Managing Director of East Midlands based PhysioPod UK Limited www.physiopod.co.uk

“I sustained an injury (medial ligament) in a football match. My knee was very swollen and painful. It was suggested to me that I could treat myself at home by using The DEEP OSCILLATION® PERSONAL SPORTS available from PhysioPod UK Limited. For 2-3 weeks, I used this machine and it was very relieving of the pain, it also helped take down the swelling. I think using this machine was better than using an ice pack and taking anti-inflammatories, which is what I would usually use at home to help the healing process of an injury. This machine was much more effective and I could definitely feel a difference after each use. In my profession, it is easy to sustain minor injuries, DEEP OSCILLATION® PERSONAL SPORTS is a good self treatment handy to have for use at home”.

Hot on the heels of the DEEP OSCILLATION® PERSONAL SPORTS endorsement from Carl Froch (reigning British Super Middleweight Title Holder) PhysioPod are delighted to receive this testimonial from Deon Burton.
Dear Sir or Madam,

We want to thank the company PHYSIOMED for the service of the multifunctional combination therapy unit IONOSON-Expert during the football world championship qualifications of the Asian group in Germany in 2006. The medical division of our football A National Team of Uzbekistan uses the device effectually as initial therapy as well as aftercare of injured players. Once again thank you very much for the competent and pleasant support.

B. Rahimov
Vice President
Halle (Westfalen): The physiotherapists of the German Handball National Team trust in PHYSIO-MED® devices. Frequently used not only during the worlds are the combination therapy unit IONOSON-Expert as well as the especially for the sports sector developed DEEP OSCILLATION® PERSONAL SPORTS. With the last-mentioned now the players for the first time are able to do a self-treatment in case of oedema for example. Right before the beginning of the competition Pascal Hens and Markus Baur have been treated (see pictures below).

Dortmund – Norbert Mommsen, one of the physiotherapists of the DHB (German national handball federation), supports the players for the World Cup 2007. Amongst other patients he’s currently treating Frank von Behren. His choice: the combination therapy unit IONOSON-Expert.
Handball player Irina Poltoratskaya – 2 times World Champion and winner of 2006 World Cup says:
“It’s no secret, that professional athletes are people with a whole range of chronic health problems. The application of medical instruments made by PHYSIOMED, especially the DEEP OSCILLATION® method, both during the training and competition phases, allows a speedy and effective liquidation of acute conditions in various illnesses. It promotes a quick physical restoration. This is extremely important nowadays, when the list of prohibited substances grows constantly, but the amount of injuries and illnesses, unfortunately, stays the same!”

Doctor of the Russian women’s Handball National Team and of the women’s Handball Club “Zvezda” (Russian Super league), says:
“We regularly and purposeful use medical devices from the PHYSIOMED product range. Compactness, simplicity in operation, reliability, longevity and service quality are the main criteria for our choice. The received results are impressive! The main area of use is upper and lower limb injuries, as a result of physical overloads or mechanical trauma. We are convinced that the therapy with DEEP OSCILLATION® PERSONAL is excellent as prevention measure too, due to the fact that injuries of the locomotor system do not appear “out of nothing”. Many years of experience in sportive medicine have made me a huge fan of these devices. I can’t imagine my daily work without the usage of these.”

The DEEP OSCILLATION® has changed the way we treat our players with the Atlanta Thrashers. Since being introduced to the DEEP OSCILLATION® we started implementing this into our treatment programs. From muscle spasms to deep thigh contusions to post-surgical scar reduction, it has changed the way we handle acute and chronic problems. Also with its battery life, we are able to treat players on charter flights and in hotel rooms when we travel. I know that from now on I will always have a DEEP OSCILLATION® in my training room!

Munich – PHYSIOMED ELEKTROMEDIZIN AG was assigned to be the official supplier of the German Ice Hockey Federation. The medical team uses the IONOSON-Expert for the physical care of the German Ice Hockey National Team.

Press release:

DEB and PHYSIOMED extend Partnership
SCHNAITTACH. The German Ice Hockey Federation e.V. (DEB) and PHYSIOMED ELEKTROMEDIZIN AG have extended their partnership, which has existed since 2005, an additional three years until 2010.

As the official partner of the German Ice Hockey Federation and German National Ice Hockey Team, PHYSIOMED will provide the DEB with IONOSON Expert units (combination unit: two-channel electrotherapy and ultrasound) as well as DEEP OSCILLATION® PERSONAL SPORTS units (fast regeneration for muscle aches, strains, inflammation, swelling, and wounds in an easy-to-hold, portable size), including the required treatment components. In addition, each year the DEB will receive the latest PHYSIOMED products for the treatment of injured national team members.

DEB Director of Sport Franz Reindl: “For two years we have been using devices from the PHYSIOMED product spectrum on the national team, and have obtained impressive treatment results. Whether because of strain, injury, or simply as a preventative measure – the products from PHYSIOMED have impressed both our physical therapists and the members of the national team through their broad range of functions. For this reason, we are pleased to remain associated with this reliable partner for an additional three years. It enables us to offer care using high-performance, efficient products that meet the high medical requirements of professional athletes.”

Andreas Maier, PHYSIOMED ELEKTROMEDIZIN AG: “We are working toward a continual exchange of experiences between users and science, and have found a reliable partner in the DEB. We are most happy for the opportunity to continue working with this top flight team, and we wish the German National Ice Hockey team and its coaching staff every success in the future.”

Ref: Evaluation HIVAMAT 200

Being the physiotherapist of the Austrian Downhill Skiing National Team, I have been working with the HIVAMAT 200 since October 1996.

Especially in Downhill Skiing, where trauma occur very frequently, the HIVAMAT is a great support for the treatment. Even in the acute stage an immediate detumescence and pain relief may be achieved by manual lymphatic drainage supported by HIVAMAT, by which I mean a better recovery of the athletes. The HIVAMAT has proven to be successful especially in the treatment of distortions.

I started the treatment on the second day after accident on an ankle joint with massive hemorrhasis. Therapy was executed as follows:
1-2 local treatments daily with high frequency 150-200 Hz, followed by lymphatic drainage of the entire leg with low frequency 5-15 Hz. Additionally bandages and antiphlogistic measures were used.

After only 7 days the athlete was again able to ski freely and participated in a World Cup race after another week. Two weeks later the athlete was entirely free from pain and discomfort.

In back pain (in lumbar spine area caused by jumps) with extremely elevated tonus of the autochthonus back muscles an immediate detonization could be achieved by a HIVAMAT treatment with medium frequency.

To conclude, the unit is excellent for the treatment of acute and subacute traumas. After hard training the HIVAMAT can also be used for the treatment of sore muscles, which results in faster recovery. The size and operation of the unit are suitable for applications in sport.

The unit can be recommended to all sports therapists.

PHYSIOMED PRODUCT  DEEP OSCILLATION®
Physiotherapist of the Peruvian Taekwondo National Team

“When used after fresh postoperative swellings, we observe a much quicker reduction in oedema than in patients who had no additional treatment with DEEP OSCILLATION®.”
MS, ATC, LAT
Head Athletic Trainer
Florida Atlantic University

“After using the DEEP OSCILLATION®, I have experienced great results that are not comparable with traditional modalities. Some of the results noted are reduced swelling, pain and increased range of motion immediately following a treatment session. I would recommend use of the DEEP OSCILLATION® to anyone who is actively seeking an edge to treating musculoskeletal injuries. It is a staple to what we do in the training room at FAU and I hope that others get to see and take advantage of its benefits as well.”
“We have implemented the use of the DEEP OSCILLATION® into our treatment protocols and have had great results, especially with the treatment of edema and the reduction of pain. We have used the DEEP OSCILLATION® on everything from acute knee sprains to patellar tendonitis, high ankle sprains to plantar fasciitis and it has helped to limit the time lost due to sport injuries. The hands-on treatment time required is far outweighed by the treatment benefits and the therapeutic effect of a hands-on treatment.”

“Louisiana Tech is proud to be the first Sports Medicine Department in the University/College setting to integrate the DEEP OSCILLATION® into the therapy of their student-athletes. The HIVAMAT® 200 has greatly enhanced our rehabilitation and treatment protocols. We at Louisiana Tech University Sports Medicine use this therapy method on a daily basis for the management of many different athletic injuries.”
M.A., A.T.C.
Director of Athletic Training
Louisiana State University

“Since we purchase the DEEP OSCILLATION®, we have seen some amazing results. It definitely moves edema better than any other modality we have. We have also had a lot of success with chronic conditions, such as tendonitis and bursitis.

As Athletic Trainers we are always trying to find the quickest route and the quickest treatment in order to get the athletes back on the field. We have found the benefits we obtain from the DEEP OSCILLATION® far outweigh the time that it takes to complete a treatment.”
